IDAHO PUBLIC
UTILITIES COMMISSION

BEFORE THE IDAHO PUBLIC UTILITIES COMMISSION

IN THE MATTER OF THE APPLICATION)	CASE NO. AVU-E-16-06
OF AVISTA CORPORATION FOR A)	CASE NO. AVU-E-16
FINDING OF PRUDENCE FOR 2014-2015)	
EXPENDITURES ASSOCIATED WITH)	
PROVIDING ELECTRIC AND NATURAL GAS)	DIRECT TESTIMONY
ENERGY EFFICIENCY SERVICE IN THE)	OF
STATE OF IDAHO)	LYNN ROY
)	
		REPRESENTING
		Nexant, Inc

FOR AVISTA CORPORATION

(ELECTRIC AND NATURAL GAS)

1 I. INTRODUCTION

2 **Q. Please state your full name, business address, and**
3 **company name.**

4 A. My name is Lynn Michelle Roy, and my business address
5 is 867 Coal Creek Circle, Suite 120, Louisville CO 80027. My
6 employer is Nexant, Inc.

7 **Q. On whose behalf are you presenting testimony in this**
8 **proceeding?**

9 A. I am testifying on behalf of Avista Utilities.

10 **Q. Have you previously submitted testimony in this**
11 **proceeding?**

12 A. No, I have not.

13 **Q. Please describe your qualification.**

14 A. I hold a Bachelors degree in Engineering Physics and a
15 Masters degree in Mechanical Engineering. I have been
16 working in the area of demand side management (DSM) program
17 design, implementation, and evaluation since 2001. I have
18 authored or co-authored several dozen reports on the
19 evaluation of DSM programs for utilities, as well as state,
20 and federal agencies across North America. I have presented
21 at multiple energy efficiency industry conferences on
22 industry standard evaluation methods and findings of
23 interest. I am a member of the Association of Energy Service

1 Professionals (AESP) and the Associated Energy Engineers
2 (AEE) Certified Energy Manager (CEM).

3 **Q. Describe your current and previous job**
4 **responsibilities.**

5 A. I am currently a Principal Consultant in Nexant's
6 Strategy and Planning group as part of the Utility Services
7 Business Unit. I help oversee the work of 30 engineers,
8 analysts and consultants in the Strategy and Planning Group
9 including project oversight, subject matter expertise, staff
10 mentorship, quality control, and management. From 2007
11 through 2011, prior to working in the Strategy and Planning
12 group, I provided oversight to all project work directed out
13 of the Colorado office.

14 **Q. Describe your involvement in the delivery of Avista**
15 **DSM programs.**

16 A. Nexant, along with our subcontractor Research Into
17 Action, was retained by Avista to serve as the third-party
18 independent evaluator of its 2014 and 2015 Demand Side
19 Management (DSM) programs in Idaho and Washington. As such,
20 we conducted impact and process evaluations of the programs
21 in the residential, nonresidential, and low income sectors.

1 The evaluation covered electric programs in Idaho and
2 electric and natural gas programs in Washington.

3 **Q. Were the evaluations prepared in accordance with**
4 **industry standards?**

5 A. Yes. All evaluations were conducted in a manner meeting
6 industry standards and established protocols. These include:
7 (1) the Department of Energy Uniform Methods Project, 2013,
8 2014 (2) International Performance Measurement and
9 Verification Protocols: Concepts and Options for Determining
10 Energy and Water Savings Volume 1, January 2012 (3) Model
11 Energy Efficiency Program Impact Evaluation Guide: A
12 Resource of the National Action Plan for Energy Efficiency,
13 November 2007; and (4) Electric Power Research Institute:
14 Guidebook for Energy Efficiency Program Evaluation,
15 Measurement, and Verification, 2008.

16 **Q. Have you conducted similar portfolio-level**
17 **evaluations before?**

18 A. Yes. Under my supervision, Nexant has recently
19 completed similar program evaluations for the following
20 electric and natural gas utilities and state and federal
21 organizations other than Avista:

- 22 1. Georgia Power Company
- 23 2. Mississippi Power

- 1 3. NorthWestern Energy
- 2 4. Efficiency Maine
- 3 5. Lawrence Berkley National Lab
- 4 6. Colorado Governors Energy Office
- 5 7. Oklahoma Department of Commerce
- 6 8. Missouri Gas Energy
- 7 9. Elizabethtown Gas
- 8 10. Independent Electricity System Operator

9 **Q. Have your evaluations elsewhere been reviewed by Public**
10 **Utility Commissions or state-level evaluators?**

11 A. Yes. In cases listed in the previous question where
12 evaluations were conducted for a utility, the evaluations
13 were either reviewed and approved or are in the process of
14 being reviewed and approved by the representative utility
15 commissions.

16 **Q. What is the purpose of your testimony?**

17 A. The purpose of my testimony is to present the findings
18 of our evaluations for the 2014-2015 time period.

19 **Q. Are you sponsoring any exhibits to be introduced in**
20 **this proceeding?**

1 A. Yes. I am sponsoring Exhibit No. 2, Schedules 1 and 2.
2 Schedule 1 is the 2014-2015 Impact Evaluation and Schedule
3 2 is the 2014-2015 Process Evaluation.

4 **Q. Describe Nexant's approach to conducting evaluations of**
5 **DSM programs.**

6 A. Nexant believes that successful evaluations rely on
7 shared expectations that are clearly outlined in the
8 research objectives developed during the planning phases of
9 the evaluation. This shared understanding, which comes from
10 a clear recognition of program theory and logic, goals, key
11 performance indicators, and processes, is achieved through
12 clear communication with stakeholders and utility DSM
13 program staff. We also strongly believe in regular
14 communication between the evaluation team and the program
15 staff to allow for near real-time feedback on evaluation
16 findings and recommendations. We also presented regularly to
17 the stakeholders represented in Avista's Advisory Group to
18 inform them of the project status.

19 **Q. Were Avista's DSM programs cost-effective during the**
20 **2014-2015 timeframe?**

21 A. Yes. Nexant conducted cost-effectiveness analyses for
22 the 2014 program year and the 2015 program year separately
23 for reporting in Avista's Annual DSM Reports. For Avista's

1 Idaho 2014 overall portfolio (including regular income and
2 low income), the electric gross Total Resource Cost (TRC)
3 test benefit cost ratio was 1.76 and the electric gross
4 Program Administrator Cost (PAC) test benefit cost ratio was
5 3.22. For Avista's Idaho 2015 overall portfolio (including
6 regular income and low income), the electric gross TRC test
7 benefit cost ratio was 1.29 and the electric PAC test benefit
8 cost ratio was 2.39.

9 **Q. Describe Avista's energy efficiency internal**
10 **Organization structure.**

11 A. In the first six months of 2014, Avista's energy efficiency-
12 related activities were organized into two teams that had
13 different degrees of separation from the Company President. The
14 Planning, Policy, and Analysis (PPA) Team was led by a Director
15 of Energy Efficiency Policy who reported to the Senior Vice
16 President Energy Resources. The program Implementation Team was
17 led by a Director of Energy Solutions who reported to the Company
18 President.

19 The PPA team's main role was to conduct the technical
20 analyses in support of DSM policy and planning, including
21 evaluation as well as conservation potential assessment, measure
22 and program cost-effectiveness assessment, conservation business
23 plan development, and DSM reporting. The Implementation Team
24 comprised three groups led by three managers. The ten-person DSM

1 group consisted of program managers, program coordinators, and an
2 executive assistant, and reported to the Manager of DSM. The
3 seven-person Energy Solutions group consisted of account
4 executives reporting to the Manager of Energy Solutions. The six-
5 person EE Engineering group consisted of engineers of various
6 degrees of seniority, reporting to the Chief EE Engineer. The
7 three group managers reported to the Director of Energy Solutions,
8 who reported to the President.

9 In July, 2014, Avista re-organized and the Energy Solutions
10 group (with its staff of account executives) was separated from
11 the Implementation Team umbrella into a new stand-alone group.
12 The groups continue under the same manager and same director, but
13 the director (Director of Energy Solutions) no longer has the DSM
14 groups reporting to the position. The DSM groups are under a
15 Senior Manager, Energy Efficiency. Both the Director of Energy
16 Solutions and the Senior Manager, Energy Efficiency report to the
17 Senior Director, Customer Solutions. The Senior Manager, Energy
18 Efficiency directs three groups/functions (four including Oregon
19 DSM activities). These are program management (still led by the
20 Manager of DSM, supported by the same team of program managers
21 and coordinators), EE engineering (still led by the Chief EE
22 Engineer, supported the same engineering team), and DSM analysis
23 (formerly the PPA team; now conducting cost-effectiveness
24 analysis, EM&V planning, and related contract management). Under
25 the new organization, the DSM analysis group included three of

1 the staff from the prior organizational structure - the DSM
2 analytical manager, the EM&V engineer, and one of previously three
3 utility resource analysts. The responsibilities of the DSM
4 analytical manager were modified to eliminate program evaluation,
5 with continued responsibility for the analytics associated with
6 program planning and reporting.

7 **Q. Please describe any data collection and activities**
8 **associated with the evaluation.**

9 A. Full impact evaluations were performed for the electric
10 portfolio covering the low income, residential, and
11 nonresidential sectors. The low income impact evaluation
12 included billing analysis of electric and conversion
13 measures using the full population of 2014 and 2015
14 participants. The nonresidential impact evaluation performed
15 172 site and/or metering visits, 268 document audits,
16 individual site billing analyses, simulation modeling, and
17 engineering calculations. Teams of engineers spent multiple
18 weeks in the field at different points in 2015 and 2016. The
19 residential impact evaluation was informed by billing
20 analyses of the following residential programs: shell, fuel
21 efficiency, HVAC, and low income. A participant and control
22 group billing analysis was performed for the residential
23 behavior program as well. Engineering savings analysis

1 included document audits, utility bill analysis and a review
2 of savings calculation methodology and assumptions,
3 utilizing the Regional Technical Forum (RTF) and Avista's
4 2014-2015 Technical Reference Manual (TRM). A total of 259
5 document audits and 222 telephone surveys were conducted for
6 residential measure verification, and onsite inspections
7 were conducted on 75 homes in support of a lighting hours of
8 use study.

9 The process evaluation completed 339 residential
10 participant, 70 residential non-participant, 339
11 nonresidential participant, and 70 nonresidential non-
12 participant surveys. The evaluations also included 82
13 contractor interviews, 27 lighting retailer interviews, as
14 well as interviews with several implementation contractors,
15 and Avista program staff. The process evaluation covered key
16 topics based on the source of the data. Staff and
17 implementers topics covered program goals and processes,
18 communication and coordination, data tracking, future
19 program opportunities, and outreach. Contractor and utility
20 customer topics covered program awareness, satisfaction,
21 motivations to participate, sales practices, program
22 experience, net to gross, and uptake of Simple Steps
23 products. Database analysis covered participation patterns

1 and repeat participation. Details on each of these
2 evaluation activities and results can be found in the
3 associated Nexant reports: Impact Evaluation of Idaho 2014-
4 2015 Energy Efficiency Programs and Process Evaluation of
5 Avista's 2014-2015 Energy Efficiency Programs.

6 **Q. Please summarize the Company's gross electric**
7 **energy efficiency-related savings for this time period.**

8 A. As shown below in Table 1, 31,081 MWh of gross energy
9 savings were acquired through Avista's Idaho DSM projects
10 between January 1, 2014, and December 31, 2015. The electric
11 portfolio had a realization rate of 97%.

12

13

Table 1. Reported and Evaluated Electric Savings

Sector	Reported Savings (kWh)	Realization Rate (%)	Gross Verified Savings (kWh)
Residential	18,772,837	97%	18,281,513
Nonresidential	12,379,360	94%	11,687,224
Low Income	758,955	147%	1,112,301
PORTFOLIO	31,911,152	97%	31,081,038

14

15 **Q. What are the gross electric energy savings by program?**

16 A. The 2014-2015 program years' gross savings are
17 summarized in Table 2 by program.

18

1

Table 2. Evaluated Electric Savings by Program

Sector		2014-2015 Verified Gross Savings (kWh)
Low Income		1,112,301
Nonresidential	EnergySmart Grocer	2,138,035
	Food Service Equipment	70,971
	Green Motors	23,823
	Motor Controls HVAC	252,751
	Commercial Water Heaters	103
	Prescriptive Lighting	3,432,865
	Prescriptive Shell	29,474
	Fleet Heat	3,917
	Site Specific	5,735,284
Residential	Appliance Recycling	416,524
	HVAC	521,365
	Water Heat	354,675
	ENERGY STAR Homes	173,120
	Fuel Efficiency	3,198,893
	Lighting	10,457,288
	Shell	345,048
	Opower	2,814,601
Total		31,081,038

2

3 **Q. Did Avista achieve its filed electric goals for 2014-**
4 **2015?**

5 **A.** Yes, the Idaho Integrated Resource Plan (IRP) goal was
6 satisfied in 2014-2015 (Tables 4).

7

Table 4. IRP Goals and Evaluated Savings

2014-2015	kWh
Local Evaluated Savings	31,081,038
2014-2015 IRP Goal (2013 IRP)	30,996,200
Percent of Goal	100%

8

1 Q. What were the key findings of the residential process
2 evaluation?

3 A. The following bullets outline the key findings:

- 4 ▪ Simple Steps, Smart Savings, Opower Home Energy
5 Reports, and Low-income are running smoothly. There
6 were no reports of systemic problems with recruitment,
7 communication, and implementation. Challenges
8 encountered mainly revolved around customer databases.
9 For example, smaller retailers in the Simple Steps,
10 Smart Savings program struggle with reporting sales
11 data because they lack a sophisticated reporting system
12 that larger retailers typically have and Opower was
13 unable to send Home Energy reports for about six months
14 in 2015 when Avista changed its customer billing system
15 in January/February 2015.
- 16 ▪ Contractors were aware and familiar with Avista's
17 programs. More than three-quarters of residential
18 contractors reported completing projects that received
19 Avista rebates for at least the past five years.
- 20 ▪ Avista's marketing efforts are working in generating
21 customer awareness. The source of program awareness

1 among customers is consistent with Avista's marketing
2 activities.

3 ▪ Contractors were the main source of awareness for
4 participants. Awareness through a contractor was
5 greater than any other source and was by far the
6 greatest predictor of program participation.

7 ▪ Awareness of other Avista programs among participants
8 varied. Fewer than half of surveyed participants were
9 familiar with other energy efficiency rebate
10 opportunities from Avista (besides the program in which
11 they had participated) and this varied by program.

12 ▪ Participants were satisfied with the rebate programs.
13 More than four-fifths (84%) of surveyed participants
14 reported their overall satisfaction with their Avista
15 rebate program experience as being either "very" or
16 "completely" satisfied.

17 ▪ Most (80-85%) contractors reported being satisfied with
18 the length of time needed to complete the paperwork and
19 range of qualifying products. The majority (67%) were
20 satisfied with Avista website and about half (54%)
21 reported being satisfied with the rebate amounts.

- 1 ▪ Contractors provided the lowest satisfaction ratings on
2 the marketing aspects of the rebate programs. However,
3 in their follow-up comments, these contractors
4 indicated they were largely unaware of Avista's
5 marketing efforts or only saw the materials
6 sporadically, indicating that contractors may be more
7 unfamiliar with Avista's marketing of the rebate
8 programs than they are dissatisfied.
- 9 ▪ Nearly all rebate participants found program-related
10 information clear.
- 11 ▪ Top three motivations for participating in Avista's
12 rebate programs were: increased comfort, saving energy,
13 and saving money.
- 14 ▪ Up-front cost was the most frequently cited barrier to
15 completing an energy efficiency upgrade by
16 nonparticipants. This indicates an importance of
17 offering an incentive to customers for home improvement
18 projects.
- 19 ▪ The second most frequently cited barrier was living in
20 a rental property. Nonparticipants reported that living
21 in a rental property prohibits them from making
22 improvements to their home.

1 Additional findings and details can be found in the
2 associated Nexant reports: Impact Evaluation of Idaho 2014-
3 2015 Energy Efficiency Programs and Process Evaluation of
4 Avista's 2014-2015 Energy Efficiency Programs.

5 **Q. What were the key findings of the nonresidential**
6 **process evaluation?**

7 A. The following bullets outline the key findings:

- 8 ▪ Program participation declined over the last few years,
9 especially in lighting. The change to a T8 baseline
10 lowered incentives available for T12 upgrades,
11 negatively effecting participation.
- 12 ▪ The Energy Smart Grocer market may need to be expanded
13 to boost participation. Staff reported that Energy
14 Smart Grocer has seen diminished savings over the last
15 few years due to the market getting saturated. Program
16 staff is seeking new markets, such as restaurants and
17 other food service establishments, to boost
18 participation but that segment alone may not singularly
19 compensate for the savings decline.
- 20 ▪ Contractors play a notable role in the acquisition of
21 projects, the implementation of projects, and in
22 informing customers about rebates. Customer's awareness

1 of the program through contractors was associated with
2 an increased likelihood of program participation, and
3 contractors appear to be playing a larger role in
4 preparing applications than in years past.

- 5 ▪ Participants were largely satisfied with Avista's
6 programs. The large majority of participants reported
7 high levels of satisfaction with program elements such
8 as the time it took to apply, the variety of equipment
9 available, and the quality of the products received.
- 10 ▪ Contractors and participants reported high satisfaction
11 with their interactions with program staff.
- 12 ▪ Contractors value Avista's rebates but there is an
13 opportunity to use the programs to train contractors.
14 Contractors reported they value Avista's rebates to
15 help them sell jobs and push customers to install more
16 efficient equipment.
- 17 ▪ The Small Business program is running smoothly. The
18 program is meeting its overall goals for measure
19 installation and savings and there were no reports of
20 any systemic problems with interval communication or
21 administration.

1 ▪ There is an opportunity to improve the efficiency of
2 small businesses, particularly in the lighting area.
3 Program data shows and installers reported ample
4 opportunity in the market to replace T12s. More than a
5 third of 2015 participants had T12 fixtures.

6 Additional findings and details can be found in the
7 associated Nexant reports: Impact Evaluation of Idaho 2014-
8 2015 Energy Efficiency Programs and Process Evaluation of
9 Avista's 2014-2015 Energy Efficiency Programs.

10 **Q. What recommendations resulted from the residential**
11 **impact and process evaluations?**

12 A. Select impact recommendations in the residential sector
13 include:

14 1) For the HVAC program, a reexamination of assumptions
15 related to annual per-home consumption and savings
16 estimates in homes receiving Air Source Heat Pump
17 measures and utilizing a detailed description of the
18 replaced unit in required documentation for a better
19 understanding of the baseline.

20 2) For the water heat program, update the current
21 allocation of energy savings from 50% to electric and
22 natural gas to an assumption based on the
23 representative water heater fuel type saturation, using

1 either data specific to their territory or the Regional
2 Building Stock Assessment study.

3 3) Include HERS scores in the ENERGY STAR homes program,
4 and inclusion of gas meter installation or start
5 service date for the fuel conversion program, will help
6 facilitate energy savings calculations.

7 4) For the shell program, assumptions about per-home
8 consumption should be revisited to increase alignment
9 with savings found in billing analyses.

10 5) For the Simple Steps Lighting Program Avista should
11 consider using Simple Steps higher resolution deemed
12 values for internal reporting with the Simple Steps
13 program and for use with internal residential lighting
14 programs.

15 6) In the Fuel Conversion Program, re-evaluating the
16 current savings cap for fuel conversion projects. In
17 addition, align assumptions for fuel switching savings
18 for the Low Income and Fuel Efficiency programs. The key
19 residential process evaluation recommendation is to
20 investigate energy saving opportunities in the
21 residential rental market. Additional detail and
22 recommendations can be found in the associated Nexant
23 reports: Impact Evaluation of Idaho 2014-2015 Energy

1 Efficiency Programs and Process Evaluation of Avista's
2 2014-2015 Energy Efficiency Programs.

3 **Q. What recommendations resulted from the nonresidential**
4 **impact and process evaluations?**

5 A. Select impact recommendations made by program include; 1)
6 For the Site Specific program and Prescriptive Lighting
7 programs, that Avista consider applying the interactive
8 factors deemed by the RTF to quantify the interactive effects
9 between lighting retrofits and their associated HVAC
10 systems. 2) For the HVAC Motor Controls program, additional
11 verification of motor eligibility status is recommended.
12 More specifically, more emphasis should be placed on confirming
13 motor application and duty status to ensure compliance with the
14 program's existing eligibility requirements. 3) Avista should
15 consider more internal review of energy savings estimates
16 submitted by vendors for custom projects under the EnergySmart
17 Grocer program. Alternatively, Avista could consider tracking
18 custom EnergySmart Grocer projects under the Site Specific program
19 with other projects of similar size and complexity. 4) For the
20 Small Business program it is recommended that the modified
21 deemed savings values utilized by the evaluation team be
22 adopted by the program for future reporting purposes. Key
23 process recommendations are that Avista should continue to

1 work with nonresidential lighting contractors to make sure they
2 are fully aware of the advantages that more efficient lighting
3 offers their customers, and for Avista to develop a marketing
4 approach specifically targeting the replacement of T12
5 lamps. Additional detail and recommendations can be found in the
6 associated Nexant reports: Impact Evaluation of Idaho 2014-2015
7 Energy Efficiency Programs and Process Evaluation of Avista's
8 2014-2015 Energy Efficiency Programs.

9 **Q. What recommendations resulted from the low income**
10 **impact evaluations?**

11 A. Nexant recommends that Avista align assumptions for fuel-
12 switching savings between the Low Income and Fuel Efficiency
13 programs.

14 **Q. Based on the process evaluation findings, were the**
15 **programs delivered efficiently?**

16 A. Yes, compared to similar undertakings by other
17 utilities, they were.

18 **Q. Can you please summarize your testimony?**

19 A. Yes. I believe the evaluation of Avista's 2014-2015
20 energy efficiency programs addresses all impact and process
21 evaluation needs in accordance with industry and regulatory
22 standards. The impact evaluation on the 2014-2015 program
23 years verified electric savings exceeding Avista's IRP

1 goals. The process evaluation revealed that the programs are
2 run smoothly and efficiently and some areas for improvement
3 exist.

4 **Q. Does that complete your pre-filed direct testimony?**

5 A. Yes, it does.

6
